

DIPANSH BHASKAR GORE

FULL-STACK / MERN STACK ENGINEER

Ghatanji, Maharashtra | +91 7057650685 | dgore7078@gmail.com

[Portfolio](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Results-driven Full-Stack/MERN Engineer with expertise in React.js, Next.js, Node.js, and MongoDB. Adept at translating high-fidelity designs into responsive code, managing complex state, and integrating scalable REST APIs. Proven ability to leverage AI developer tools to optimize code quality and deliver high-performance web applications.

TECHNICAL SKILLS

Frontend: React.js (React 19), Next.js (App Router), JavaScript (ES6+), HTML5, CSS3

Backend: Node.js, Express.js, RESTful APIs, JWT Authentication

Databases: MongoDB, MongoDB Atlas, SQL

Styling & UI: Tailwind CSS, Material UI, Bootstrap, Framer Motion

State & Architecture: React Hooks, Context API, Zustand, Socket.io, Component-Based Architecture

AI & Developer Tools: LLM Prompt Engineering, AI-Assisted Development (GitHub Copilot / Cursor), Git, GitHub (CI/CD), Vercel, Render, Postman, Vite

PROJECTS

Product Admin Dashboard | Next.js, Tailwind CSS, Axios, Vercel

[Live Demo](#)

- Engineered a production-ready administrative dashboard utilizing the Next.js App Router, managing state entirely via URL parameters to ensure 100% deep-link stability for pagination, search, and category filtering.
- Optimized API network performance by implementing a 400ms search debounce and integrating AbortController to cancel in-flight requests, completely eliminating data race conditions during rapid user input.
- Architected optimistic local React state updates to seamlessly handle mock CRUD operations (Add, Edit, Delete) against the DummyJSON API without backend persistence.

Real-Time Chat Application | MERN Stack, Socket.io, JWT, Render

[Live Demo](#)

- Developed a secure full-stack messaging platform featuring instant WebSocket communication, successfully tested with multiple concurrent users to verify live presence and real-time typing notifications.
- Implemented robust JWT-based authentication to protect API routes, manage user sessions, and secure user interactions.
- Integrated Cloudinary for media processing and MongoDB Atlas for database storage, deploying via an automated GitHub CI/CD pipeline on Render.

Agri-Zone B2B Marketplace | MERN Stack, Node.js, Express.js

[GitHub](#)

- Co-developed a comprehensive MERN-stack platform connecting regional farmers with commercial buyers, directing client-side state management across 8-10 distinct frontend routes for seamless UI responsiveness.
- Engineered 10-15 REST API endpoints for authorization, role-based access control, and inventory, collaborating directly with backend engineering to ensure robust data flow.

INTERNSHIP

Web Developer Intern | JK Innovative Pvt. Limited July 2022 – October 2022 | Amravati, Maharashtra

- Collaborated within an agile 3-member team to architect and deploy a full-stack web application.
- Engineered responsive, mobile-first user interfaces utilizing HTML, CSS, and JavaScript, ensuring strict cross-browser compatibility.
- Integrated backend REST API endpoints and managed MongoDB database operations to support dynamic, data-driven application features.

EDUCATION

Bachelor of Engineering in Computer Science & Engineering

May 2024

Sipna COET, Amravati, Maharashtra

CGPA: 8.5/10
